

# PROTECTION SERVICE FOR BUSINESS STANDARD

Automated and easy-to-use IT security solution for SMBs

## IT security challenges of SMBs

Modern business depends heavily on computers. At the same time, criminals are constantly creating new ways to use the Internet for their illegal activities. In spite of these facts, many small and medium sized businesses (SMBs) still lack an up-to-date security solution, which would protect their business environment.

## Peace of mind – when time or place do not matter in IT security

Resources and budgets for IT security are often limited. At the same time, the office environment is becoming more mobile, and the number of targeted attacks is rising. In this situation, a fully automated security solution with online management tools is the best choice. You don't need to worry about software upgrades, virus definition updates or in-house servers for IT security. Instead, you can focus on your core business and reduce costs.

## F-Secure solution

F-Secure® Protection Service™ for Business, Standard version (PSB) ensures your business is safe from Internet-based security threats. It is a complete package consisting of security software and a management portal.

## Benefits

F-Secure Protection Service for Business, Standard version is easy to install, deploy and configure. The management portal has predefined security profiles, which provide you a good starting point for your IT security. There are predefined profiles for different user groups.

The solution includes all you need - virus and spyware protection, spam control, intrusion prevention, application control and a firewall.

The management portal is accessible from anywhere, at any time.

Automatic security updates and software upgrades are delivered directly to your workstations. This makes the solution easy to maintain.

In addition to office workers, the security status of remote workers can be monitored at all times.

## Protection Service for Business

The solution protects desktop PCs, laptops, and file servers as well as Microsoft Exchange servers. It protects them against viruses, spyware and hidden malware (rootkits). In addition, the solution contains a firewall, intrusion prevention and application control. Built-in spam control keeps your e-mail free from spam and other unwanted messages.

You can manage all security information with an easy-to-use, web-based management portal. It gives you an overview of the security status of your company network. You can also easily set and monitor the security settings of your company's desktop PCs, laptops and servers.

Automated features ensure that your operations work 24/7 with minimum intervention and IT resource use.

### Solution components and their features:

#### F-Secure PSB Portal

Using the online portal, you can manage your system's security settings, view status and create reports anywhere, anytime.

#### F-Secure PSB Workstation Security

Comprehensive security for desktop and laptop computers: Antivirus, antispyware, intrusion prevention, application control, proactive protection (F-Secure DeepGuard™), rootkit detection (F-Secure Blacklight™) and spam filtering.

#### F-Secure PSB Server Security

Antivirus, antispyware, system control, rootkit detection, local setting of security features (if allowed in the portal), automatic virus definition updates.

#### F-Secure PSB E-mail and Server Security

PSB Server Security, Anti-Virus for Microsoft Exchange and Spam Control for Microsoft Exchange, with automatic virus definition updates. The Exchange components are managed with a local web based management interface.
