

# F-Secure Anti-Virus for Microsoft Exchange 7

## Today's challenges

Most computer viruses spread by e-mail. Many of the new fast spreading and destructive viruses are targeted at Microsoft Exchange and Outlook environment. Therefore, it is especially important for Microsoft Exchange users to protect their networks.

## The solution

F-Secure® Anti-Virus™ for Microsoft Exchange 7 makes sure that Microsoft Exchange users can use e-mail and other IT systems safely, and the 64-bit support brings the performance of the product to a new level. The product protects storage and transport Exchange 2007 server roles, including Edge, Hub, and Mailbox/Public Folder servers.

F-Secure Anti-Virus for Microsoft Exchange 7 is designed specifically for Microsoft Exchange 2007. It shields the corporate network from viruses, worms and Trojans that spread by e-mail. It also detects and removes viruses in documents and notes that are posted to public

The optional F-Secure Spam Control™ for Microsoft Exchange protects users against spam e-mail and other content that is not work-related. This increases the productivity of employees and saves network bandwidth. Furthermore, reducing the amount of spam also reduces your company's concerns for legal liability.

## Key features

Designed for Microsoft Exchange 2007

Easy-to-use web user interface

### Combination of Easy-to-use and Advanced Functionality

The easy-to-use web user interface makes installation and administration of the product easy for small and medium business customers. The re-designed user interface in version 7 is even more intuitive and user-friendly than before. Advanced users and large customers benefit from the powerful, centralized management

### Award-winning Antivirus

F-Secure Anti-Virus for Microsoft Exchange 7 uses several virus scanning engines to provide effective signature-based protection against viruses, worms and Trojans. The product also protects users against new, unknown malware, thanks to new proactive technologies that find and eliminate unknown (zero-day) threats.

### Automatic Virus Definition Updates

Virus definition databases are updated transparently and automatically several times a day. This guarantees that your system is always up-to-date.

### Several Scanning Options

The product scans both incoming and outgoing e-mails. It also supports real-time and background scanning of mailboxes and public folders.

### Advanced Message Filtering

In addition to known viruses, the product recognizes new, unknown viruses by looking for typical features of viruses. You can also protect your network against fast-spreading viruses, worms and Trojans by activating e-mail filtering. You can filter e-mails by their file types and names.

### Automatic Spam Filtering

Optional F-Secure Spam Control for Microsoft Exchange detects annoying and offensive spam messages in the company's e-mail traffic, and filters them automatically and transparently.

### Support for Trusted Senders and Recipients

The system administrator can exclude certain sender and recipient e-mail addresses from security checks and content filtering. For example, it is possible to exclude a dedicated e-mail address that is used for archiving purposes.

### Improved Quarantine Management

Quarantine management has been revised to make it easier to control the objects within the repository.

### Centralized Management for all Areas of Your Network

With F-Secure Policy Manager, the system administrator can manage the security of workstations, servers and gateways through a single console. Centralized management also makes it easy to administer several Exchange Servers in a large network.
