

PROTECTION FOR LAPTOPS AND DESKTOPS

Uncompromised online security without sacrificing performance

F-Secure Client Security 10 offers enhanced security with new detection technology for all the latest platforms, without compromising performance. Available for Windows 8 and other Windows platforms, it is also available for different Linux distributions.

Integrating the latest detection technology with state-of-the-art proactive protection and automatic real-time defense, Client Security 10 offers a cutting-edge security against all online threats.

These include browser exploits, viruses, spyware, malware, zero-day attacks, rootkits and identity thefts. Working seamlessly together with the F-secure Labs, the automatically updating scanning technology offers a quick and efficient response even to constantly evolving threats.

The security products work transparently without end-user intervention, and can be centrally managed with F-Secure Policy Manager.

Client Security

Latest security for latest platforms

F-Secure Client Security 10 offers enhanced security with the new DeepGuard detection technology, which has a proven detection track record from independent 3rd party testing organizations. This ensures a state-of-the-art proactive protection to all platforms.

Faster and safer in every way

The F-Secure Real-time Protection Network is an in-the-cloud reputation technology utilized by our Improved Browsing Protection and the new DeepGuard 4 features. The network enables improved detection, faster response to threats, and better client performance.

Client Security 10™

Supports all the latest Platforms, including Windows 8

Enhanced protection against unknown threats through the New DeepGuard 4

Improved Browsing Protection for augmented security against malicious sites

Uncompromised security with a minimal performance impact

Easy set up and maintenance

E-mail and Web traffic scanning

Cutting-edge Firewall with intrusion prevention

Central management without end-user intervention

Improved browsing protection

The improved Browsing Protection feature clearly shows the end-user which websites are safe to enter and which to avoid. It automatically blocks harmful sites designed to spread malware or steal your online identity, ensuring a significantly safer web browsing experience with all major browsers.

Lighter and easier than ever

The version 10 uses our upgraded client, making it both lighter and faster than before. Together with our intuitive user interface and pro-active protecting technology, it enables the product to work without end-user intervention, while simultaneously reducing the management tasks of administrators.

Cutting-edge personal firewall

The integrated desktop firewall provides robust monitoring and filtering of internet and local area network traffic. This protects workstations from hackers and network worms by preventing unauthorized access to workstations over the network.

The firewall enables a dynamic selection of profiles based on location, and application control provides a way for network administration to centrally control workstation applications that access the internet.

Anti-virus for workstations

Anti-Virus is a powerful antivirus, antispymware and antirootkit solution for corporate environments with basic needs. It includes DeepGuard technology that gives enhanced protection against zero-day threats. This product is light on resource use and can be centrally installed, configured and managed.

For complete Windows workstation protection, including e-mail scanning, personal firewall and browsing protection, please see Client Security.

Linux Security

Linux Security provides effective protection for Linux workstations against malware and attacks from the network. It is an out-of-the-box ready security solution with strong real-time antivirus protection, Host Intrusion Prevention (HIPS) functionality protecting against unauthorized connection attempts, system modifications, user space and kernel rootkits. Its personal firewall makes sure intruders are not able to enter the workstation.

The solution is easy to deploy in mixed environments and can be centrally managed with an online management portal. It ensures that an effective security policy extends to all levels of the network.

Professional support services

In addition to our cutting-edge online security, our professional support services ensure that your online security is not compromised by problems in your IT infrastructure. Localized Support Services are also available in multiple major languages.
